

# **The 9<sup>th</sup> International Conference on Maternal and Child Health (MCH) Handbook**

**Yaounde, Cameroon – September 15 to 17, 2015**

***Effective Use of the MCH Handbook :  
A Tool to Continue Progress for MDGs 4 and 5 Beyond 2015***

Mothers and children deserve nothing but the best health care possible. With the eve of the Millennium Development Goals' (MDGs) deadline, the hope of reaching the targets is slowly fading for a number of countries, especially in Africa. Efforts have been made in reducing the high incidence of maternal mortality and childhood disease. An effective strategy that supports healthy pregnancies, reduces birth risks and improves the quality of child care is the Maternal and Child Health (MCH) Handbook. The MCH Handbook program guarantees the proper continuum of care essential among mothers and their children worldwide.

Since 1998, with the first "International Symposium for MCH Handbook Initiatives" held in Japan, the International Conference on MCH Handbook has succeeded into one of the foremost platforms in exchanging experiences of implementing MCH programs from different parts of the world. Through continuous dialogue with relevant experts and stakeholders, it allowed a better understanding of each country's unique requirements and develop technology to support improved maternal and child healthcare.

Much is yet to be accomplished. With your support, you will allow the International Conference on MCH Handbook in further empowering healthier mothers and children worldwide through the MCH Handbook. It is our position that no mother or child should ever go without access to quality care throughout their care continuum.
